Farm Stewardship Workshop a Success Despite the Snow

East Central **Farm Stewardship** *Collaborative*

An overflow crowd attended the 3rd Annual Kawartha Farm Stewardship Workshop last Saturday. The event was designed to celebrate on-farm stewardship achievements, and to inform the farming community about the many resources available to support them.

This full-day workshop featured presentations by farmers and industry professionals on topics such as: practical strategies for reducing neonicotinoid use (Greg Stewart, OMAFRA); creative options and solutions for livestock watering; the benefits of wetlands and biofilters in farm drainage; and the 4R's of nutrient stewardship. as well as the many sources of funding and technical support available to farmers across the region from KFSC partners.

Farmers identified more than two dozen projects they would like to undertake over the next couple of years, through a voluntary [project intake process](#) [1] and conversation with partners in the Collaborative who provide funding and technical assistance.

If you didn't make it to the workshop this year, visit the [Collaborative's web page](#) [2] to get an idea of the many resources available to you. You can complete an online form at any time, and a member of the Collaborative will contact you to obtain more details and talk about support available.

Farm Stewardship Workshop a Success Despite the Snow
